Education

Northeastern University — Khoury College of Computer Sciences — Boston, MA

B.S. Computer Science — *Expected April 2029*

Experience

PayNways Worldwide | *Java 21, WildFly, MySQL, Redis, ISO 8583, LMAX Disruptor* — NJ (Hybrid)

Software Engineering Intern — *Jun 2026 – Sep 2026*

- Built an enterprise-grade ISO 8583 payment processing engine in Java 21 from scratch, supporting real-time authorization and batch clearing/settlement end-to-end for Mastercard, Visa, American Express, and Discover.
- Implemented each network's wire and file formats (CIS/IPM, VIP/BASE II, GCAG/GFSG, Authorization/Sales Data) with multi-layer validation, Redis duplicate detection, and graceful degradation.
- Engineered configurable, database-driven transaction rules enabling runtime updates without redeployment.
- Designed a transaction pipeline benchmarked toward ~12-15ms warm round-trips and 50M+ transactions/day.

Google Code Next Connect Lab — Remote / NYC

CS Enrichment Program Participant — *Sep 2023 – Mar 2024*

- Selected for Google's competitive Code Next Connect Lab for emerging computer science students.
- Participated in hands-on software development, problem-solving, and mentorship sessions.
- Collaborated with peers and active Google software engineers on technical challenges and projects.

Projects

Autonomous Escrow & Blockchain Platform | *MongoDB, Web3.py, AWS EC2/S3* — *Oct 2024 – Present*

Founder & Full-stack Developer

- Built and operated an automated escrow platform serving 10,000+ users across multiple online communities.
- Facilitated $1M+ in secured crypto transactions using automated blockchain escrow workflows.
- Implemented blockchain hot-wallets (BTC, ETH, USDT, more) with validation & fraud prevention systems.
- Developed MongoDB and AWS infrastructure supporting transaction logging and platform automation.

BrawlMart Digital Marketplace (Web + Discord) | *Next.js, Discord.py, Stripe* — *July 2023 – Present*

Founder & Operator

- Built and operate a full-stack digital marketplace for in-game services, serving 15,000+ users across both web and Discord, with Stripe payments and automated order delivery.
- Designed a Next.js platform enabling seamless browsing, ordering, and service fulfillment.
- Managed end-to-end operations including fulfillment, disputes, and customer support workflows.

Orbit | *Next.js, TypeScript, Python, AWS EC2, Playwright, Claude API* — *Oct 2026 – Present*

Personal Project

- Built a Next.js PWA and Python pipeline on AWS EC2 syncing Canvas, Gradescope, Gmail, and Plaid data.
- Automated job applications with Playwright and the Claude API across Workday, Greenhouse, and Lever.
- Used the Claude API to parse course syllabi into cached grading schemes that compute live grades.

Technical Skills

Languages: Java, Python, C++, C#, JavaScript, TypeScript, SQL, HTML/CSS, x86/x64 Assembly

Frameworks & Libraries: React, Next.js, Node.js, Express, Tailwind, Discord.py, Unity3D, NextAuth.js

Databases & Cloud: MySQL, MongoDB, Redis, AWS (EC2, S3), Firebase, Flask

Systems & Reverse Engineering: Windows Internals, Windows API, x86/x64 Architecture, Static & Dynamic Analysis, Ghidra, IDA Pro, x64dbg, ReClass.NET, Cheat Engine

Tools: Git, Linux (Ubuntu), Docker, WildFly, Tomcat, Maven, Gradle, Postman, Visual Studio, IntelliJ, VSCode
